DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:

(1) The availability of appropriate facilities, personnel, equipment, and services to comply with the provisions of this subchapter;

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries,

The facility is currently housing 2 Watusi that are slightly sub-optimal in weight. Both animals were acquired from the same source on different dates.

A heavy internal parasite load diagnosed via fecal testing and conducted on the day of acquisition was documented in the medical record of the male Watusi acquired in July 2009. The animal was subsequently de-wormed according to the medical record immediately after testing. A fecal test conducted one week after the deworming indicated a low worm burden was still present. The medical records for this animal do not contain any additional documentation of subsequent dewormings or diagnostics to indicate successful therapy was achieved for the parasitic condition. The medical record for a female Watusi obtained in May 2010 does not contain any documentation of fecal testing or dewormings.

A facility veterinarian stated that appropriate fecals and dewormings were conducted on these animals but not recorded. To ensure adequate veterinary care is established and maintained appropriate therapy/treatment for medical conditions must be achieved and demonstrated.

Correct by: July 3, 2010.

DIRECT NCI

SHELTERED HOUSING FACILITIES.

(g) Public barriers. Nonhuman primates used in trained animal acts or in uncaged public exhibits must be under the direct control and supervision of an experienced handler or trainer at all times when the public is present. Trained nonhuman primates may be permitted physical contact with the public, as allowed under Sec. 2.131, but only if they are under the direct control and supervision of an experienced handler or trainer at all times during the contact.

The facility has initiated public opportunity for direct contact with lemurs. During this inspection, one of these direct contact encounters was viewed by this inspector. Three lemurs, which were stated to be 6 months of age and of adult size, were observed freely jumping wildly through out a room in which 2 adult members of the public were seated. The lemurs would haphazardly launch onto the public at will and were not tethered or leashed in any fashion. Two staff members were present during the encounter, however, one staff member was responsible for photography and could not provide supervision.

Non-human primates are permitted physical contact with the public only if they are under the direct control of an experienced handler or trainer at all times during the contact. The mobility of these 3 animals even at 6 months of age as evidenced by random jumping through out the room and random jumping on and off the public clearly demonstrated direct control could not be executed with one staff member and 3 free-roaming animals.

To protect the animals and public from potential injury, all non-human primates in physical contact with the public must be under the direct control of a handler or trainer at all times during the contact.

2.131 (c) (1)

HANDLING OF ANIMALS.

(c)(1) During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

No barrier is currently in place to prevent direct public access to the kangaroos. During this inspection a member of the public was seen touching a young kangaroo directly through the enclosure fence. No attendant was stationed at the enclosure. To ensure the safety of the animals a public barrier should be erected a sufficient distance from the enclosure fence to prohibit public access to the animals.

Correct by: December 20, 2007

3.127 (b)

FACILITIES, OUTDOOR.

(b) Shelter from inclement weather. Natural or artificial shelter appropriate to the local climatic conditions for the species concerned shall be provided for all animals kept outdoors to afford them protection and to prevent discomfort to such animals.

The enclosure housing the 5 kangaroos has no artificial shelter and insufficient natural shelter to provide the animals adequate protection from inclement weather. To ensure an appropriate comfort level for the animals and protection from the elements an adequate shelter must be provided.

Date: Apr-28-2009

2.126 (a)

ACCESS AND INSPECTION OF RECORDS AND PROPERTY.

(a) Each dealer, exhibitor, intermediate handler, or carrier, shall, during business hours, allow APHIS officials:

- (1) To enter its place of business;
- (2) To examine records required to be kept by the Act and the regulations in this part;
- (3) To make copies of the records;
- (4) To inspect and photograph the facilities, property and animals, as the APHIS officials consider necessary to enforce the provisions of the Act, the regulations and the standards in this subchapter;

On April 28, 2009, at 1:30 p.m., the licensee was unavailable to conduct an animal welfare inspection. The property manager was reached by telephone and explained that he was off site and could not easily return to the facility for up to 2 hours. The facility and animals were unable to be inspected for compliance with the standards and regulations under the Animal Welfare Act.

This is the first attempted inspection.
